

**KEY**

- Definite
- Approximate and/or concealed
- Inferred
- Folds**
- Active Anticline
- Active Anticline

**Note:** All faults and folds shown here are class III adopting the activity classes of Pettinga et al. 1998 i.e. faults and folds that do not clearly affect geomorphic surfaces less than 25,000 years old.

**Note:** Transition of deeply incised and meandering Waihao River to straighter river course here at projection of fault.
